

Take an input *string* parameter and determine if exactly 3 question marks exist between every pair of numbers that add up to 10. If so, return *true*, otherwise return *false*. Some examples test cases are below:

```
1  "arrb6???4xxb15???eee5" => true
2  "acc?7??sss?3rr1?????5" => true
3  "5?aaaaaaaaaaaaaaaaa?5?5" => false
4  "9???1???9???1???9" => true
5  "aa6?9" => false
```
